Description

A blend of soft Micac provides superior application when combined with a silky, smooth Talc. A surface treatment of Triethoxysilylethyl Polydimethylsiloxyethyl Methicone on the pigments provides compatibility with the binder and extends the wear. This background is then combined with KTZ® Pearlescent Pigments, some having special effects, to deliver a multicolor glow to liven the skin tone. A combination of Microspheres, SP-10 and BPA-500, helps to provide soft focus. Skin benefits are delivered via a combination of Silicone and Vitamin E.
