

Solid Microsphere Complexes

Solid Microsphere Complexes are blends of materials of different composition which create products with unique characteristics and performances.

EA-209-RBTD-4555 associates a pigmentary rutile titanium dioxide with an acrylate microsphere to make a product with excellent color and coverage while having a creamy feel. **MSX-511** combines PMMA and Calcium Phosphate for feel, soft focus and oil absorption. **GWP-500EP** blends two microspheres

for a silky skin feel and excellent soft focus. **KoboBlur™ 100 Natural** is made only of minerals and natural ingredients, using no plastic particles; the ingredients of this complex have complimentary refractive indexes and scatter light in a wide range of formulas.
