

Transparent Iron Oxides Dispersions & Powders

Transparent Iron Oxides offer many benefits for use in personal care applications, particularly, a Natural Finish on the skin, SPF Boosting and added UVA Protection.

When incorporated into sunscreen products they tint the formula reducing the appearance of whitening and chalkiness, while also contributing to UV Attenuation. In Ethnic Products, Transparent Iron Oxides offer the right balance of transparency and coverage that allows a natural look. Transparent Iron Oxides are much smaller than regular iron oxides, and therefore the particles tend to agglomerate very strongly, making them difficult to disperse. Kobo offers dispersions as well as surface treated powders of Transparent Iron Oxides that can easily be incorporated into a formulation.

Description

This bronzer wand gives skin a sun-kissed glow. Kobo's TTB-Treated Pigments are used to enhance formula wear and to showcase the ease of use in this formula. **Transparent Iron Oxides** offer low coverage to improve skin appearance. KOBOGUARD® 5400 CCT forms a film on the skin to help provide long wear properties. Kobo's ITT treated MICA S-12, gives the formula a luminous effect. MSP-AK06, a polymethylsilsesquioxane (PMSQ) microsphere composite, is used for optical enhancement.
